

Hospital Systems *has teamed with* guestLINK *to change the patient room environment*

By incorporating the guestLINK™ PowerWave™ into our headwalls or columns, HSI is bringing the latest cutting edge hospitality technology to the hospital. By simply plugging their electronic devices into the PowerWave™ (conveniently located in the headwall or column) patients and hospital staff can quickly and easily connect to the in-room HDTV resulting in a better all around medical guest experience.

Patients can plug in their laptop, camcorder, digital camera, gaming system, DVD player, iPod or iPhone, and more, to play games, view photographs or videos from their personal video library on the HDTV screen. They can listen to their music using the HDTV speakers or pillow speaker.

Clinicians can connect their laptops and other devices to the hospital intranet and can also present to patients and their families over the in-room TV

Patient Benefits Include:

- A more relaxed environment
- A greater feeling of control
- A greater number of creature comforts
- Entertainment for family (especially kids and grandkids) and friends

Clinician Benefits Include:

- Easy bedside charting
- Increased communication with the patients
- Increased visibility of disease management presentations
- More relaxed patients
- More relaxed patient visitors
